

Java

```
class Solution {  
    public int countStudents(int[] students, int[] sandwiches) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} students  
 * @param {number[]} sandwiches  
 * @return {number}  
 */  
var countStudents = function(students, sandwiches) {  
  
};
```

C++

```
class Solution {  
public:  
    int countStudents(vector<int>& students, vector<int>& sandwiches) {  
  
    }  
};
```

C#

```
public class Solution {  
    public int CountStudents(int[] students, int[] sandwiches) {  
  
    }  
}
```
